

FFICM OSCE Example Questions

Question Number	ICM OSCE Example 2
Question Title	ECG

Candidate instructions:

This station assesses your ability to interpret electrocardiograms. You will be shown ECGs from four different patients.

1. This ECG is recorded from a patient with a history of stable angina. They have had continuous chest pain for 90 minutes. Please systematically describe this ECG.

Examiner Marking Guide	Show the candidate ECG A.	
	<ul style="list-style-type: none"> Checks patient ID and date/time of ECG (both required for mark) Sinus rhythm and rate 60 per minute (accept 50 to 75) ST segment depression leads V1 to V3 ST segment elevation leads II, III and aVF 	

2. What diagnoses are suggested by this ECG and the clinical details?

Examiner Marking guide	Prompt 'can you be more specific' if candidate says 'myocardial infarction')
	<ul style="list-style-type: none"> Inferior myocardial infarction Posterior myocardial infarction

3. This ECG was recorded from a 75-year-old patient in ICU who is intubated and ventilated. ECG on admission to ICU was normal. Please systematically describe this ECG.

Examiner	Show the candidate ECG B.
Marking guide	<ul style="list-style-type: none"> • Rate 75 per minute (accept 65 to 85) • Sinus rhythm (accept sinus arrhythmia) • T wave inversion V2 to V4 • T wave inversion aVL

4. What is the most likely diagnosis?

Examiner	
Marking guide	<ul style="list-style-type: none"> • Myocardial ischaemia (accept 'acute coronary syndrome' or similar)

5. This 60-year-old patient presented to the Emergency Department with breathlessness and chest pain. Please systematically describe this ECG.

Examiner	Show the candidate ECG C.
Marking guide	<ul style="list-style-type: none"> • Right bundle branch block (accept RSR pattern in V1) • One premature ventricular extrasystole (accept ectopic beat)

6. Which important diagnoses should you consider as a priority?

Examiner	
Marking guide	<ul style="list-style-type: none"> • Pulmonary embolism • Coronary artery disease (accept ischaemic heart disease or similar)

7. This 58-year-old patient is admitted to ICU with a history of chest pain and 'collapse'. Please systematically describe this ECG.

Examiner	Show the candidate ECG D
Marking guide	<ul style="list-style-type: none"> • Rate 50 to 100 per minute, and variable (all required for mark) • Mobitz type II Second degree heart block • Non-specific ST-T wave changes leads V2 to V6

8. What two areas constitute the immediate specific management for this patient?

Examiner	
Marking guide	<ul style="list-style-type: none"> • Stabilisation of heart rhythm with pacing • Investigation and treatment of precipitant

NB: Any patient names and details used in these examples are fictitious
